DETAILED ACTION

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in a patent granted on an application for patent by another filed in the United States before the invention thereof by the applicant for patent, or on an international application by another who has fulfilled the requirements of paragraphs (1), (2), and (4) of section 371(c) of this title before the invention thereof by the applicant for patent.

The changes made to 35 U.S.C. 102(e) by the American Inventors Protection Act of 1999 (AIPA) and the Intellectual Property and High Technology Technical Amendments Act of 2002 do not apply when the reference is a U.S. patent resulting directly or indirectly from an international application filed before November 29, 2000. Therefore, the prior art date of the reference is determined under 35 U.S.C. 102(e) prior to the amendment by the AIPA (pre-AIPA 35 U.S.C. 102(e)).

Claims 1-21 are rejected under 35 U.S.C. 102(e) as being anticipated by Maleck et al., (US 6,611,912), sited 06/15/04.

As per claims 1-3, 6-8, 11-13, and 16-19, Maleck teaches a data processing system comprising:

- a processor;
- a memory device coupled to the processor by a local bus;
- an input device coupled to the processor by the local bus;
- an output device coupled to the processor by the local bus;
- an operating system operable for running on the system;

- a driver stored in the memory device;
- a PCI bus coupled to the local bus;
- a controller (Fig.1) coupled to the PCI bus;
- a codec (inherent) coupled to the controller; and
- a connector coupled to the codec and adaptable for coupling to a telecommunications network, wherein the PCI controller further comprises:
 - a codec query routine operable for reading an identification code from
 - a memory location on a codec, the identification code unique to a manufacturer of the codec; and
 - a loader routine operable for loading a driver as a function of the identification code, wherein the driver is loaded only if the unique identification code is read from the codec. (Maleck, Abstract, Figs. 1-3, col. 1, lines 15-col. 8, lines 1-65)

Maleck teaches a method of determining one or more riser card (AMR audio/modem riser) codecs (vendor ID codes) provided by a riser card connected to a motherboard via a PCI bus, wherein an vendor ID associated with the audio/modem codecs is used for loading drivers corresponding to the vendor ID.

As per claims 4, 9, 14, and 20, Maleck teaches wherein the driver is supplied by the manufacturer.

As per claims 5, 10, 15, and 21, Maleck teaches wherein the identification code is assigned by an industry standards organization.
